We support a patch of 80 local primary  
schools in the Hambleton and  
Richmondshire area.

Our secondary colleagues at Bedale High  
School provide similar outreach support  
for children with high functioning autism

### What we do:

- Provide a specialist support service to local schools, at their request, for children from Year 1 to Year 6 with speech, language and communication difficulties, including autism spectrum
- Following intervention work in school, we offer specialist support and advice on strategies, resources and personalised planning for the young person
- We work directly with schools in our locality on a range of agreed interventions
- We offer training with a variety of subjects linked to speech, language, communication and interaction difficulties, including basic autism awareness
- Part of our role is to work in the host school (Mill Hill) to offer advice and support so that we provide a communication friendly environment for our pupils and **all staff** skills are developed and enhanced through regular training opportunities and information sharing
- We have an holistic approach to our work, regularly liaising with a range of other professionals in the community such as speech and language therapists, occupational and physiotherapists, team colleagues from the specific learning difficulties EMS and the behaviour, emotional and social difficulties EMS, educational psychologists, paediatricians and clinical psychologists at Brompton House.
